## SICGILSOL INDIA PRIVATE LIMITED

# InfoHEALTH<sup>®</sup> SOLution

The innovative software for the informatic management of medical gases and plants

## The SOL Group

The SOL Group, founded in 1927 in Monza, is one of the most dynamic and innovative reality in the scientific, medical and industrial applications.

The SOL Group is a leading company in the production of industrial and medical gases, in the realization of plants and facilities for their distribution, in the delivery of products and management services for the hospital sector.

The skills matured over decades with customers enable the SOL Group to offer specific solutions and services in all activities related to the use of gases.

In particular, the integrated platform called InfoHealth<sup>®</sup> SOLution has been developed to ensure the **complete traceability of medical gases and the management of maintenance activities** inside hospital.

The software has been developed for the **Pharmacy, the Technical Management and Clinical Engineering**.

## InfoHEALTH<sup>®</sup> SOLution

InfoHealth<sup>®</sup> SOLution is an integrated software provided with innovative technology that consists of:

- a **total web management**, by which all the authorized users may access to the different features of the system, run reports, view and attach relevant documents;
- a **complete mobile management**: all the different technical and traceability activities are performed by the use of a smartphone, tablet or PDA through a dedicated App.

The system is easy and intuitive for all. Its optimized to suit all needs and to allow a steady growth in the efficiency and effectiveness for the technical and economical management of the facilities.

## An all inclusive system:

- access to data anywhere and anytime
- simple, intuitive, interactive
- traceability of the movements of the gas - cylinders within the structure
- from the Web to Mobile with a simple click
- acquisition of the electronic signatures directly on the mobile device
- analysis and reports

## Available modules:

### Maintenance

- Registration and scheduling of ordinary and extraordinary maintenance activities;
- Complete and updated census of the medical gas pipeline system;
- Maintenance management directly on the field by the use of mobile devices.

### Traceability

- Management of the cylinders movements within the facilities;
- Checking of the batch - valve - test expiration date of cylinders;
- Communication with SOL domestic software for a complete control of the cylinders.

### Statistics

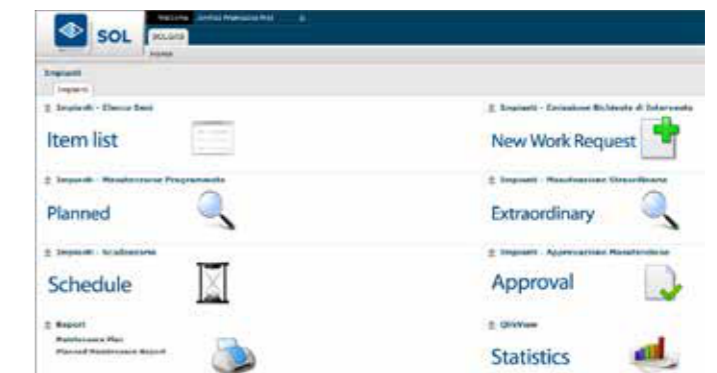

- Data analysis, organization and sharing in simplicity;
- An effective and intuitive reporting system.

### TeleWeb

- Link to the SOL system for remote sensing of tanks inside hospitals;
- Real-time monitoring of the levels and pressures of the gas inside tanks and ramps;
- Display of warning and alarm signals.

Some screenshots of the software: statistical analysis and management of maintenance.
